INTRODUCTION

The figures compiled in this report have been derived from a community population census undertaken in June, 1982, for the remote and unorganized Northern Manitoba communities which fall under the jurisdiction of the Minister of Northern Affairs. The census is to continue on a regular basis for these particular northern communities.

The census count was conducted on a house-to-house basis in 49 remote settlements by local enumerators chosen by their respective councils/committees.

The census was conducted in basically the same manner in each remote settlement. The peculiar characteristics of each community were taken into account, i.e., site and situation, questionable boundaries, sprawled housing vis-a-vis planned subdivisions, island vis-a-vis mainlands, climatic variations, accessibility and so on.

In each community the census results were reviewed by three parties: the enumerator(s), the council/committee and the Northern Coordinator. The council/committee resolutions then formalized the acceptance of the community populations.

The purpose of the Department of Northern Affairs census was to provide an alternative to the Statistics Canada population figure for the specific 49 settlements, as it had been determined that the Statistics Canada figures were inadequate for the Department's requirements.

The population data for 1978 has been included in this report to allow easy identification of changes occuring in each community over the four-year period between censuses.

The processing and the statistical analysis appearing in this report have been compiled by the Department of Northern Affairs.

STATISTICAL SUMMARY OF CENSUS DATA

The population of the remote communities in northern Manitoba declined by 213 persons between the date of the 1978 census and the June census of 1982. Only one region, the Selkirk region, had an increase in population (109) and the Thompson region had the largest decrease (243). This decrease may reflect the fact that a census was not carried in Cross Lake in 1982 and the 1978 census data has been used as a proxy.

Other significant changes that have occurred include:

1. A decline in the number of children between the ages of 0 and 14 years as a percentage of the total population as well as in actual numbers.
2. An increase in the percentage of the population in the labour force ages of 15 to 64 years as well as an increase in actual numbers of 250 persons (+5.0%).
3. A decline in the child-women ratio.
4. A decline in the dependency ratio.
5. A decline in the number of households from 2,152 in 1978 to 2,072 in 1982. No change has occurred, however, in the number of persons per household.
6. The number of children per household has declined from 3.2 in 1978 to 2.7 in 1982.

While Selkirk and The Pas regions are similar in population size, 1,509 in Selkirk and 1,407 in The Pas, the population structure within each region differs substantially. In the first place, The Pas region include five communities with an average size of 281. The Selkirk region, on the other hand, has sixteen communities with an average size of 94. The Pas region has the youngest population with 40.8% under fifteen years of age. At the lower end of the range, Selkirk's population under fifteen years represents 29.5% of its total.

The largest region in the North, the Thompson region, has a total of 3,955 people and an average community size of 247. The Dauphin region, while considerably smaller than Thompson, is still twice as large as Selkirk and The Pas, having a total population of 2,837 and an average community size of 236.

SUMMARY TABLES FROM 1982 CENSUS OF POPULATION FOR REMOTE COMMUNITIES IN NORTHERN MANITOBA, BY REGION

	DAUPHIN REGION		SELKIRK REGION		THE PAS REGION		THOMPSON REGION		TOTALS OF REGIONS	
	1978	1982	1978	1982	1978	1982	1978	1982	1978	1982

INCREASE OF POTENTIAL LABOUR FORCE 1978-82
FOR REMOTE COMMUNITIES IN NORTHERN MANITOBA
BY REGION

	1978	1982	TOTAL INCREASE	DECREASE
DAUPHIN REGION	1,561	1,574	.80%	
SELKIRK REGION	810	952	17.50%	
THE PAS REGION	650	776	19.00%	
THOMPSON REGION	2,018	1,987		1.5%
TOTAL FOR REGIONS	5,039	5,289	5.00%	

EXPLANATORY NOTES

During the processing of the northern census, it became evident that some judgement decisions would have to be made with regard to some of the survey information.

Most important was the location of the residences of the residents claiming allegiance to the community. In some cases, notably Oxford House, St. Theresa Point and Cross Lake, some of the residents live on the adjoining Indian Reserve land. As one of the main purposes of the census was to count populations for the purpose of allocating tax-sharing grants, it was essential to count only those people living within the community boundaries. Those living on the Reserve are counted in Reserve populations for the purpose of allocating these tax-sharing grants and therefore if they had been counted in the community, grants would have been paid twice for those people living on the Reserve. The populations of Oxford House and St. Theresa Point reflect the number of residents living within the recognized community boundaries. The question was not resolved at Cross Lake and as a consequence, no census of the population was undertaken. The 1978 population for this community has been used throughout this document as a proxy for the 1982 population. The 1981 Census of Canada population for the Cross Lake community is given as 510.

The Inter-Community population in the Dauphin region was not counted in this census and the population of both the Dauphin region and the total populations for all regions for 1978 was reduced to 9,921 from 10,017 to reflect this change and make comparisons with the 1982 census possible.
